ARCHAEOLOGY AS A TOOL FOR PEACEMAKING

Shortly after publishing Volume 3, a colleague submitted a very interesting paper about the value of archaeology as a tool for peace between Israel and Palestine. As it passed the review process, we thought it would be interesting to open the topic for debate and discussion in order to support what we understand as a fair cause. Thus, we created this second forum in close relation to the main topics (looting and conflict) and asked for contributions by different authors. Three of them responded and that was enough for us to open a discussion on a very relevant topic for public archaeology based on a critical experience of current interest.

Weeks passed by and just as we were trying to close Volume 4 this summer, the main paper was withdrawn: the author was not sure anymore about the content of a paper that had already passed the peered review—and the forum was built on it—and decided to withdraw a contribution that we, as editors, found extremely interesting.

The paper aimed to delve into the current situation of archaeology in the region and its ideological use, as well as the shift could/should be made in order to use it as a tool for peacebuilding and local development. Some ideas and examples where shown and the answers in this forum with offer some more light about them.

Timing is essential in research and June was the beginning of a very difficult time in the region this forum focuses on. We are not going to question the reasons for this withdrawal, but we need to take a moment to explain why the responses are still here and why we want this topic to be part of the journal, especially at this time.

Public archaeology is a political tool: We are not objective, we do not want to be objective, and this is a Social Science with an agenda. When Stottman asked if archaeologists could change the world (Stottman 2010) we answered YES! The use of archaeology
as a political tool is older than archaeology itself. The past serves a purpose and we have a word in this as professionals (McGuire 2010). The conflict between Israel and Palestine has been constantly escalating since the foundation of the new state in the 1940s, causing only destruction and death for both sides.

All of us in the editorial team wish to condemn this violence in the region and state that education and archaeology are one of the very few tools for understanding the conflict and helping towards a peaceful solution.

In the following texts, you will find the views of three researchers with expertise in the topic, in relation to the main paper that, unluckily, you will not be able to read, and due to respect to the withdrawal we will not reproduce further. There is no need for more context than the news and the fact that we, as public archaeologists, have a responsibility to the present. However, have a look at this video, if you have not done so yet.

Using Archaeological Information to Promote Peaceful Co-existence in Israel/Palestine

Adi KEINAN-SCHOONBAERT
University College London

The issue of the Israeli-Palestinian conflict and role of archaeology in helping sustain it has been thoroughly discussed, especially in the last decade. The social, ideological, religious and cultural dissonances present in today’s Israel/Palestine are important contributing factors behind this intractable conflict. Some of these disparities are closely linked with issues of archaeology, history, and cultural heritage. Ongoing ideological and political clashes to control the present and the past of this region have had direct implications for archaeological remains, practices and management. For example, archaeological sites are strongly affected by large-scale looting, as well as by the construction of the separation barrier, military operations and smaller-scale vandalism. The definition, protection and preservation of archaeological and heritage sites are also influenced to a great extent by political instability, poor law enforcement and ambiguity in management responsibilities. The management and interpretation of archaeological sites may also suffer from ‘cultural appropriation’ and biased presentation to the public.

The coexistence of diverse historical narratives and different prioritisations and valuations of cultural heritage has had a substantial impact on how archaeology and heritage are perceived and interpreted—and too often archaeological convictions are used as weapons in the fight for historical legitimacy. However, archaeology does not always have to drive a wedge between Israelis and Palestinians—it actually has a great potential to do just the opposite, and create a positive change towards reconciliation. Various ways to use archaeology to bridge gaps between both sides and to promote peacemaking in the region have already been suggested and implemented in the past. These include, for example, community archaeological projects, alternative tourism, and joint archaeological groups engaging in discussions on archaeology. There is yet another aspect of archaeology that can transform the
way in which local communities perceive and understand it, and that is archaeological data, information, or knowledge.

Archaeological data has been systematically acquired in Israel/Palestine since the nineteenth century. The region has been extensively surveyed and excavated mainly by European and American archaeologists, to be followed by Israeli and Palestinian ones, resulting in a series of listings and descriptions of numerous archaeological sites. Many of these archaeological inventories, or databases, are conceived to sum up our knowledge on the archaeology and history of the region. And, just as other facets of archaeology have been affected by the political atmosphere and the socio-political reality, so did data collection and the creation of archaeological inventories.

In order to understand just how the creation of archaeological knowledge has been influenced by the political circumstances in Israel/Palestine, it is important to consider the context in which archaeological data collection has taken place in the region since its inception. In the nineteenth and early twentieth centuries, archaeological practice took place in a colonial fashion—almost always by Western foreigners, and according to what they considered important or interesting to investigate. In the case of Palestine, the main interest was the bible—the Old and New Testaments—and any archaeological sites that these scriptures may have referred to. As such, cultural knowledge production has been a reflection of powerful, modern, Western societies who remained unaware of the priorities of indigenous communities, minority groups and less well-resourced societies. The dominance of Western archaeologists has had significant implications for archaeological practice, and is also well reflected in the types of data prioritised to be collected—creating and sustaining an imbalanced control over archaeological knowledge production.

This historical imbalance between the colonisers and the colonised has been gradually inherited by today’s Israel and the Occupied Palestinian Territories. Jewish archaeological societies and institutions had been active since the beginning of the twentieth century, to be followed by Israeli ones after the establishment of the State of Israel in 1948. Israeli archaeologists have been working in the West Bank since its occupation in 1967, conducting exhaustive archaeological
surveys and hundreds of excavations—endeavours which entailed mass collection of archaeological data. Many of these projects have been conducted with Israeli interests and agendas in mind—namely the research of biblical (Bronze and Iron Ages) and Jewish (Persian, Hellenistic and Roman periods) archaeological sites. Large-scale Palestinian archaeological and cultural heritage projects have been taking place primarily since the mid-1990s, after the establishment of the Palestinian National Authority. Some of these would try and shift the prevalent focus on biblical archaeology, and concentrate instead on Islamic remains or the archaeology and ethnography of the more recent past, combined with research on local traditions and ways of life. However, to this day, there is still an evident asymmetry between the sheer quantities of data collected and interpreted by Israelis and Palestinians, and each side has limited access to archaeological data generated by the other.

In today’s Israel/Palestine, both nations practice archaeology in isolation. There is no collaboration, no partnership, and no data sharing, in a region that is geographically, historically and archaeologically continuous. While archaeological projects and other cultural heritage endeavours generally adhere to high scientific standards and professional methodologies, the nature of these projects, their objectives and motivations, may greatly vary. Since many of such projects, namely archaeological surveys and excavations, include data collection and the creation of inventories, these too are affected by certain agendas and research priorities. And in turn, these seemingly ‘final’ corpuses of archaeological knowledge have a significant impact on their audiences.

One way to try and amend this reality and create a positive change using archaeology is, in my view, through the reconsideration of archaeological knowledge. When it comes to motivations, methodologies and outcomes of different types of data collection practices, it is highly important to encourage reflexivity, transparency and accountability. The glaring imbalance of power between Israeli and Palestinian institutions should be addressed in various ways, by a re-examination and re-evaluation of disciplinal practices such as research, surveys, excavations, interpretation and presentation of archaeology and cultural heritage, in order to ensure the inclusion of different narratives and cultural values.
While today’s archaeological practices are generally more reflexive and self-critical than they used to be, this should be expanded to the more specific practices of documentation and recording. Professional archaeologists should be aware of their role as mediators and interpreters of cultural knowledge, as they shape heritage records and have a significant impact on the information being passed on to posterity. Archaeological inventories can never be objective—it is impossible to collect data ‘objectively’, as choices and decisions are always being made in the process. However, being transparent about one’s own research agendas and interests is taking an important step towards trust building.

Another step in this direction would be promoting accessibility to information—making archaeological data as accessible as possible. There is a general conviction that archaeological and heritage knowledge is universal and belongs to everyone, and the prominent and the popular movement of ‘open data’ also asserts that data should be available to anyone for free and without restrictions. Therefore, by facilitating access to data, and by promoting the exchange of archaeological and cultural heritage information, we will achieve higher levels of transparency and accountability, and encourage mutual understanding, respect and trust.

Archaeologists and heritage practitioners are capable of transforming data collection and dissemination practices into positive socio-political driving forces, by taking more inclusive, responsible, critical and ethical approaches towards the study and interpretation of the past. Particularly in a region such as Israel/Palestine, professional archaeologists should be more aware of their ability to promote mutual confidence and trust and to encourage dialogue between Israeli and Palestinian organisations and communities. Archaeological and cultural heritage knowledge is indeed a resource that can facilitate a peaceful co-existence, and I am hopeful that archaeologists in the region would use this resource in a positive and constructive manner.
Palestinian archaeology between political conflicts and peace process

Ghattas Jeries SAYEJ
Vest-Agder County Council
Kristiansand, Norway
gjs@vaf.no

Although many archaeologists would like to believe that separating archaeology from ideology and politics is achievable, reality indicates something else. It is almost impossible to separate them, particularly in countries where political conflicts are hotspot issues, such as in cases concerning the Holy Land. The question is how to tackle this matter? Do we need to exploit archaeology to prove or disprove the right of existence for different ethnic groups or religions? Do we need to be a part of expanding the conflicts that already exist in the Holy Land, and thus create more hatred and distrust for generations to come? In this brief discussion, I will reflect around this disputed matter and on how we can use archaeology to build bridges instead of barriers.

Archeology as victim

The influence of colonial and nationalistic archaeology has shaped cultural heritage in the Holy Land throughout the past century. After the establishment of the state of Israel, the history of Palestine has been rewritten to adequately fit into the Zionist agenda. Some Israeli archaeologists have paid more attention to certain archaeological layers and neglected others. Some of them have not been interested in preserving the complete cultural heritage of the country as a record for all humanity, and have instead focused only on the remains relevant to Jewish history and traditions. Those in political power have maneuvered the cultural heritage of the country as they wish, without taking into consideration the vast majority of the native inhabitants who still live in their homeland.
Palestinian archaeology

During the past two decades, a new generation of Palestinian archaeologists has emerged and is fostering awareness and spreading knowledge among Palestinians (see Sayej 2010). These archaeologists, however, are divided into three major groups: academics, NGOs and governmental bodies. Instead of working towards a common goal, these groups tend not to cooperate well, most likely due to the fact that they consider each other as competitors for funding and power.

Thus, it is very important to work hard in order to achieve a common goal of protecting the cultural heritage of Palestine as a universal heritage and not as a source of income for different organizations.

Furthermore, the Palestinian territories are divided into three major parts: Gaza, which is under the control of Hamas; Areas A and B of the West Bank, which are under the control of the Palestinian Authority; and the rest of the West Bank (Area C and East Jerusalem), which is still under the control of Israel. The current political division of the Palestinian territories reflects negatively on the cultural heritage of the entire nation. Those who are in the Gaza Strip have almost no contact with their counterparts in the West Bank and vice versa. The Palestinian Authority in the West Bank has no control over the vast majority of the West Bank, which is controlled by the Israeli Authority. The Staff Officer for Archaeology of the Civil Administration of Judea and Samaria, who controls all archaeological sites and activities in most of the West Bank (area C), does not cooperate with the Palestinians. In this lack of political stability, looting of archaeological sites has flourished and is therefore one of the major challenges to the cultural heritage of the entire country. Another major problem is Israeli settlers who are using archaeology as a tool to prove their roots to the land.

Subsequently, how can we overcome all these obstacles, or at least find a way to get out of this downward spiral? It seems to me that we as archaeologists and social scientists need to do the following:

1 The political division of the West Bank has been discussed elsewhere (see Sayej 2010).
1. Political divisions among Palestinians

Palestinian archaeologists need to cooperate together beyond the geographical and political divisions. We need to be more open and talk to each other to establish a common understanding regardless of who is controlling what and who gets more funding. We need to consider each other as partners in order to achieve our common goal of protecting the cultural heritage of the Holy Land, not only as our own heritage, but also as world heritage. The abundance of technology today links people together regardless of where they live in the world, and thus the geo-political barrier is not an excuse anymore.

2. Political divisions between the Palestinians and the Israelis

This issue is even more problematic due to the fact that archaeology has been used in Israel to support the current occupation of the West Bank (e.g. Trigger 1989: 183-184). In a neighborhood of Jerusalem called Silwan, a right-wing Jewish settler organization called Elad controls most of the archaeological excavations in the old city including the Silwan neighborhood. This organization is led by ex-Israeli commando David Be’eri, and has the backing of the Israeli Prime Minister’s office, the municipality of Jerusalem, and the vaunted Israeli Antiquities Authority (IAA). The organization’s aim is best expressed in a religious website’s 2007 interview with development director Doron Speilman. He gestures toward Silwan and says: “Our goal is to turn all this land you see behind you into Jewish lands” (McGirk 2010; also see Greenberg and Keinan 2007, 2009). This kind of archaeological activity is destructive and should be stopped sooner rather than later.

Other Israeli organizations, such as Emek Shaveh, have a wide reach and are working for advocacy and to raise awareness (withdrawn paper). This organization has very high ethical standards and is well accepted locally and internationally. These kinds of organizations are welcomed by both nations and can contribute to building bridges toward a common understanding of protecting cultural heritage and using archaeology as a tool for co-existence between the two nations.
3. Looting

Archaeologists should play a positive role in preventing looting and illicit trade in antiquities. Generally speaking, one could say that if trade in antiquities is outlawed, then dealers are less able to operate freely. Looting from archaeological sites will decrease if looters lose the motivation to dig. Archaeologists are the bridge between the past and the present and can work to change perceptions and actions for future generations to come. The goal of archaeologists should be to make local societies and governments understand the importance of cultural heritage.

When we are able to do so, then we can stand together against those who are using archaeology as a tool to fit their agenda.

Conclusion

Cultural heritage among both Israeli and Palestinian societies should transcend ideological concerns and emphasize the protection of archaeological materials as a common heritage. Archaeologists can protect the heritage of the Holy Land when they accept the coexistence of other ethnic groups and religions in the region, not only in the present day but also while documenting the archaeological record. Archaeologists can use their expertise to create a mutual understanding of the past regardless of ethnicity.

This part of the world has been a passage to the old civilizations and dozens of ethnic groups and nationalities have been part of creating its rich history. It is about time to realize, therefore, that no ethnic group or sole religion has the right to live in prosperity and suppress other ethnic or religious groups. Both Israeli and Palestinians, have to realize the right of existence for the counterpart. When future generations will cooperate with each other to build a common future, then we have achieved our goal, not only as archaeologists, but also as citizens of our respective nations.

HOW TO CONTRIBUTE

AP: Online Journal in Public Archaeology welcomes original contributions that match the aims of the journal and have not been previously published anywhere else, or are not on the way to be published elsewhere. Being online and free can be understood as a sign of quality degradation, but this is not a barrier. It is just a way to adapt from the very first moment to the new panorama in research, where the Internet is the main vehicle for transmission, and more specifically in our field, where the prices of journals are unaffordable for any researcher that is not linked to a research institution. We try to give the widest publicity to the journal, to make it Public.

Having made this clear, the papers can be sent in different ways:

-Mail:

AP: Online Journal in Public Archaeology
JAS Arqueología S.L.
Plaza de Mondariz, 6
28029 – Madrid
(Spain)

-Email:

jasarqueologia@gmail.com

-Filemail.com:

Filemail.com (www.filemail.com) is a free tool to send large files that exceed the upload limit of a normal email account (Gmail, for example, permits up to 25 Mb). It is a useful way of sending, for example, large images. In this case, please contact us via email first in case we are not able to get them immediately (the link expires in three days). Of course, any other similar application can be also accepted, like Wetransfer or Dropbox.

STYLE

Length:

Full articles - We will only accept papers of less than 10.000 words (including notes and references) with a maximum of 10 figures (tables are counted as text).
Work reports – We will only accept papers of less than 5,000 words (including notes and references) with a maximum of 5 figures (tables are counted as text).

Reviews – We will only accept papers of less than 2,000 words (including notes and references) with 1 figure, that in case of book reviews will be the cover. In other events (conferences, film festivals...), the figure must clearly reflect the event.

Presentation:

To follow the indications of Public Archaeology (www.maney.co.uk/journals/pua), and aiming to standardize the procedures from our side, all material should follow the MHRA Style Guide, which can be freely downloaded from:

Figures:

The quality of figures should be good enough to be clear in a PDF file. There will not be any weird rule for the submission of the files. Just submit the figures in any readable format (able to be edited in Adobe Photoshop ®). Every camera, software of scanner can make good quality images, so just submit originals. If any figure is subject to copyright it will be essential to attach a written permission from the holder of the rights. To avoid any inconvenience, we encourage the publication of self-owned images. In any case, the author will be responsible for any violation of copyright issues.

Notes and references:

It is preferable to avoid footnotes in the text, just quote or explain in brackets.

For references use Harvard style (Author 2010: 322) followed by a final bibliography. For example: ‘according to Author (2010: 123) Public Archaeology can be...’ or ‘it has been pointed out (Author 2010: 13) that...’ etc.

Multiple citations should be in alphabetical order and separated by a semi-colon, (Author et al., 1990; Creator and Author 2003; Producer 1982).

Where an author has several publications from the same year, distinguish them with ‘lower-case’ letters (Author 2010a, 2010b). Do not use ibid.
In the final bibliography follow the system below:

**Thesis**

**Journal article**

**Book**

**Edited book**

**Section in book**

**Internet reference**

(As it is an online publication, all the quotes referring to an Internet address should be active links).

In the case of any other kind of reference not mentioned here, please contact the editor.
Once the article has been received:

The process for the acceptance of papers will be easy and fast. Once the article has reached the editor, the decision will be taken in less than 48 hours. Papers rejected from the editor will not be considered again unless they undertake major changes. Correspondence will not be continued for those papers. If the paper is pre-accepted by the editor, it will be peer-reviewed by two different experts in the common blind process. After that, the author will be given feedback and advice in order to go over the article, which will be corrected again to check if it meets the requirements of the reviewers. Once this process has finished, the article will be edited as it will appear on the journal and returned to the author for a final check (only spelling mistakes or other details, not changes on the text). The commitment of the journal is to be able to complete the whole process in less than two months.

Work reports and reviews will not need to pass the peer-review process, but will be commented by the editor.

We will be publishing one volume per year (first trimester) and although we are willing to receive papers the whole year, full articles for next-year’s volume should be sent before October in order to complete the process with time.

If you have any queries, please do not hesitate to contact the editor at: jasarqueologia@gmail.com
LIST OF DONORS

We want to thank all the people that is helping to maintain this journal. Especially those that chose to use one of the procedures in the donations page. Every little help is welcome to continue with this project, and we expect to increase this list year by year with your help.

Thank you very much:
