Review  
Archaeology in Society and Daily Live  
Dawid Kobiałka
Like a ridiculous narcissist, I will start this review writing about myself, before the author of the book. I know this probably does not fit the criteria of scientific objectivity expected in a scientific review, but it is useful to help the reader understand the context in which this new volume of *Arqueológicas* appears. I was a researcher at INCIPIT (the Institute of Heritage Sciences at CSIC, Spain) in Santiago de Compostela from 1997 (then known as the Research Group of Landscape Archaeology) to 2012. During these years, I came to know first-hand the making of my colleague David Barreiro’s PhD thesis, which he defended in 2005 and sets the basis for this book.

David, a technician with a position at INCIPIT since 2006, started his research in the mid-90s, having a background in archaeology and geography. It was then that he encountered a still persistent problem in Spain concerning territorial planning, environmental preservation and Galician cultural heritage: the introduction of wind farms in mountains of high natural value. In this context, the author helped design a theoretical-methodological framework to conduct a correct environmental impact assessment of the then initiated Galician Wind Plan (Barreiro 2000; Criado et al. 2000). I must say this was a pioneer work in Spain. The first field test of this know-how was the wind farm of Caretón (Barreiro and Villoch 1997), where I had my first job as a trainee archaeologist. This experience set the basis for the improvement of the methodology available to the sector since the very beginning. Moreover, within
the framework of the postgraduate specialization courses held in 2000, 2001 and 2002, young archaeologists from Spain and South America conducted their training on different projects of environmental impact evaluation and correction across Galician wind farms.

All this fieldwork, and perhaps also its socialization side, made the author formulate the questions this book addresses. Those years clearly revealed two conflicting and intense situations: On the one hand, most of the academia did not acknowledge the university’s involvement in public works (it was not considered research, good old days!). On the other hand, several political organizations and ecology groups opposed the energy policy promoting wind farms. Ethics, morale, corporatism, activism or just technical work; those were the dilemmas in a context of modernization (Barreiro 1997). The author faced this panorama and, as a result, wrote the first chapter of the book. From a critical archaeological perspective, inspired by the Marxist tradition and Bourdieu’s theories about science, David describes the highs and lows of the three main archaeological stakeholders involved: commercial professionals (either self-employed or in companies), administration and academia.

This is one of the main values of this book, from my point of view, as it constitutes a strange self-criticism on the part of the academia (CSIC in this case, see Barreiro 2011). Moreover, the author not only diagnoses and critiques the situation, but also proposes alternatives by consensus (Barreiro 2001). David leads by example and has conducted several activities, such as a debate workshop for the commercial archaeological sector (Barreiro 2004), focused on the archaeological activity for the last 15 years (Parga Dans 2009).

Barreiro’s proposal (complemented with another book in this collection; Criado 2012) focuses on the defence of archaeology as a “technoscience” (Echeverría 1999, 2005), that is to say a technique for the integral management of cultural heritage combining basic research and applied research (conceiving archaeology as social practice in the present). This applied archaeology is presented in Chapter 2, where an epistemological and axiological extension of archaeology is claimed as a tool for a complete socialization of archaeological heritage. Here, what is especially interesting for non-specialist readers is the concept of technical rationality, summarising in plain language the critical theories of authors such as Weber, Lúkacs, Habermas, Adorno, and Marcuse, that influenced the author’s thesis.
Chapter 3 addresses the ethical dilemma that archaeology faces: being a tool to critique the system (capitalism, market, and predation) from outside of the system, or a tool to transform the system from the inside. Barreiro articulates a *critical pragmatism* on the latter (Barreiro 2003, 2012). As a practical example, he analyses its application to a technocratic fear, such as sustainable development. These pages offer an excellent overview of the origins, development and application of sustainable development policies in archaeological heritage. His comments on the different critical approaches articulated by authors over the past 25 years are remarkable.

*Critical pragmatism* is the option selected by Barreiro to act sustainably in a system characterised by the lack of planning, political authoritarianism, electoral optimization, personal interests against the collective, short-term benefits, territorial disruption, and dependence on foreign economic interests (147-8). These pages masterly describe the situation in Galicia before and after the economic crisis.

Chapter 5 shows the applied archaeology developed by Barreiro’s research team - in and from Galicia, chosen to try rationalizing the management of archaeological heritage in the described context. Through different socialization projects, the author calls for a *chain of value* as the basis for integral management (Criado 1996; Criado and Barreiro 2010). This is one of the main contributions to archaeology from Spain, fundamental in recognised projects such as the restoration of the old cathedral in Vitoria-Gasteiz (Azkarate 2010) or the Galicia-Uruguay joint project in Tacuarembó (Giannoti et al. 2010).

These five chapters compose an honest book that does not try to dogmatize from ivory towers or coffee rooms, but gives a solid basis to the proposals of a two-decade research trajectory. In essence, it is more a proposal *from* than *towards* an Applied Archaeology. The strength in Barreiro’s proposal lies in a correct critique to the system developed before the crisis (for a previous one see Vigil-Escalera 2011).

My only criticism is the late publication of a text that basically composes a PhD from 2005. Despite the effort to update the contents, some of the ideas still lag behind the changing reality of current archaeology.

Besides that, I believe that this book offers a very useful critical reflection, becoming a plea (paraphrasing Barreiro’s admired Bourdieu) in defence of a committed archaeological knowledge.
This can be seen from the very first line and its radical truth:

Archaeology that only focuses on historical knowledge, and is unconcerned about its production, management and socialization, is insufficient archaeology.

HOW TO CONTRIBUTE

AP: Online Journal in Public Archaeology welcomes original contributions that match the aims of the journal and have not been previously published anywhere else, or are not on the way to be published elsewhere. Being online and free can be understood as a sign of quality degradation, but this is not a barrier. It is just a way to adapt from the very first moment to the new panorama in research, where the Internet is the main vehicle for transmission, and more specifically in our field, where the prices of journals are unaffordable for any researcher that is not linked to a research institution. We try to give the widest publicity to the journal, to make it Public.

Having made this clear, the papers can be sent in different ways:

-Mail:

AP: Online Journal in Public Archaeology
JAS Arqueología S.L.
Plaza de Mondariz, 6
28029 – Madrid
(Spain)

-Email:

jasarqueologia@gmail.com

-Filemail.com:

Filemail.com (www.filemail.com) is a free tool to send large files that exceed the upload limit of a normal email account (Gmail, for example, permits up to 25 Mb). It is a useful way of sending, for example, large images. In this case, please contact us via email first in case we are not able to get them immediately (the link expires in three days). Of course, any other similar application can be also accepted, like Wetransfer or Dropbox.

STYLE

Length:

Full articles - We will only accept papers of less than 10,000 words (including notes and references) with a maximum of 10 figures (tables are counted as text).
Work reports – We will only accept papers of less than 5.000 words (including notes and references) with a maximum of 5 figures (tables are counted as text).

Reviews – We will only accept papers of less than 2.000 words (including notes and references) with 1 figure, that in case of book reviews will be the cover. In other events (conferences, film festivals...), the figure must clearly reflect the event.

Presentation:

To follow the indications of Public Archaeology (www.maney.co.uk/journals/pua), and aiming to standardize the procedures from our side, all material should follow the MHRA Style Guide, which can be freely downloaded from:

Figures:

The quality of figures should be good enough to be clear in a PDF file. There will not be any weird rule for the submission of the files. Just submit the figures in any readable format (able to be edited in Adobe Photoshop ®). Every camera, software of scanner can make good quality images, so just submit originals. If any figure is subject to copyright it will be essential to attach a written permission from the holder of the rights. To avoid any inconvenience, we encourage the publication of self-owned images. In any case, the author will be responsible for any violation of copyright issues.

Notes and references:

It is preferable to avoid footnotes in the text, just quote or explain in brackets.

For references use Harvard style (Author 2010: 322) followed by a final bibliography. For example: ‘according to Author (2010: 123) Public Archaeology can be...’ or ‘it has been pointed out (Author 2010: 13) that...’ etc.

Multiple citations should be in alphabetical order and separated by a semi-colon, (Author et al., 1990; Creator and Author 2003; Producer 1982).

Where an author has several publications from the same year, distinguish them with ‘lower-case’ letters (Author 2010a, 2010b). Do not use ibid.
In the final bibliography follow the system below:

**Thesis**

**Journal article**

**Book**

**Edited book**

**Section in book**

**Internet reference**

(As it is an online publication, all the quotes referring to an Internet address should be active links).

In the case of any other kind of reference not mentioned here, please contact the editor.
Once the article has been received:

The process for the acceptance of papers will be easy and fast. Once the article has reached the editor, the decision will be taken in less than 48 hours. Papers rejected from the editor will not be considered again unless they undertake major changes. Correspondence will not be continued for those papers. If the paper is pre-accepted by the editor, it will be peer-reviewed by two different experts in the common blind process. After that, the author will be given feedback and advice in order to go over the article, which will be corrected again to check if it meets the requirements of the reviewers. Once this process has finished, the article will be edited as it will appear on the journal and returned to the author for a final check (only spelling mistakes or other details, not changes on the text). The commitment of the journal is to be able to complete the whole process in less than two months.

Work reports and reviews will not need to pass the peer-review process, but will be commented by the editor.

We will be publishing one volume per year (first trimester) and although we are willing to receive papers the whole year, full articles for next-year’s volume should be sent before October in order to complete the process with time.

If you have any queries, please do not hesitate to contact the editor at: jasarqueologia@gmail.com
LIST OF DONORS

We want to thank all the people that is helping to maintain this journal. Especially those that chose to use one of the procedures in the donations page. Every little help is welcome to continue with this project, and we expect to increase this list year by year with your help.

Thank you very much:
